Questions Responses 9

Chapter by chapter

Any doubts, questions, other ideas

I would love to discuss where to find the best resources to learn NLP and interesting topics and avenues for practical applications. A research topic can be chosen for every week, announced on Discord and people can show up discussing projects, problems or interesting aspects of said topic in a discussion that can include live coding or sharing links.

Understanding concepts, forming study/project groups, collaborate on weekly projects using what's already learned

How can we leverage NLP? How can we extract its full potential?

Discuss the chapter and the theory

Discuss any problems or concepts we find challenging, reflect on the stuff and build or ideate something practical with it.

Questions Responses 9

Maybe we could work in pairs, for example CS + Linguistics people.

GitHub

Github, github pages for demo/documentation, maybe heroku if hosting anything

Kaggle

Google collaborate or jupyter notebooks is fine

We can work together to solve Kaggle competitions. To work together, you can set up a GitHub organization which should properly streamline all projects pertaining to to this server.
