## What would you like to discuss at meetings?

5 responses

Discuss any problems or concepts we find challenging, reflect on the stuff and build or ideate something practical with it.

I would love to discuss where to find the best resources to learn NLP and interesting topics and avenues for practical applications. A research topic can be chosen for every week, announced on Discord and people can show up discussing projects, problems or interesting aspects of said topic in a discussion that can include live coding or sharing links.

Unterstanding concepts, forming study/project groups, collaberate on weekly projects using what's already learned
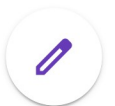

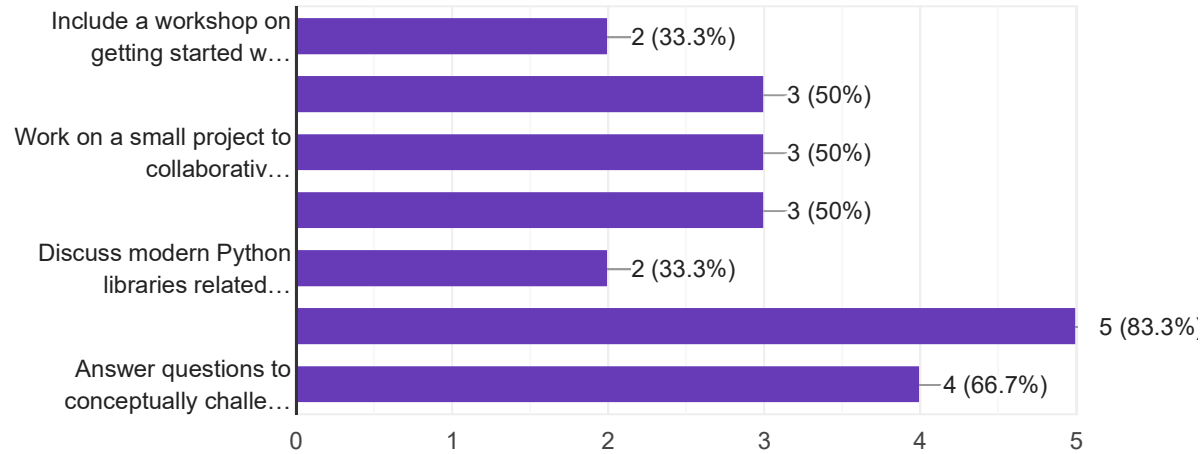

Any doubts, questions, other ideas

Do you have any suggestions for collaborative work? What would be a good platform(s) to work on exercises / projects together?

4 responses

We can work together to solve Kaggle competitions. To work together, you can set up a GitHub organization which should properly streamline all projects pertaining to to this server.
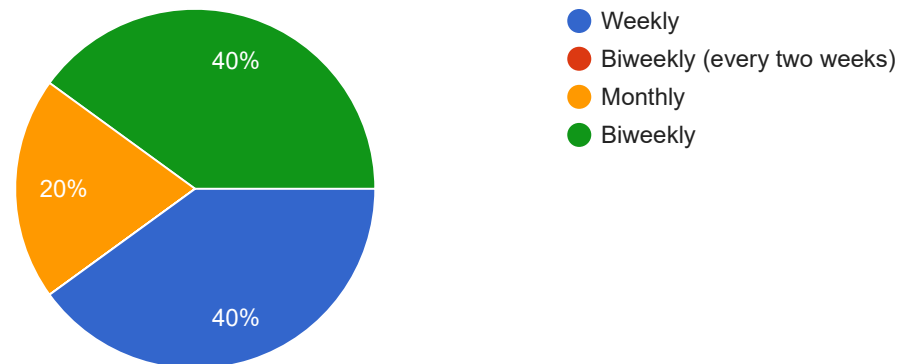

GitHub

Github, github pages for demo/documentation, maybe heroku if hosting anything

Maybe we could work in pairs, for example CS + Linguistics people.

How often would you like to meet?
